SKILLS

DESIGN & UX

· Figma — UI, prototyping, variables
· Adobe Illustrator — identity, icons
· Adobe Photoshop — compositing
· User research & usability testing
· Wireframing — low / high fidelity
· Design systems & component libraries
· Visual design & brand identity
· Motion & micro-interaction design

TECHNICAL

· HTML & CSS
· Basic JavaScript / React
· BSc Computer Science

PROFILE

I'm a UX/UI & Visual Designer with a BSc in Computer Science. I care about the details — typography, layout, color, motion — and my technical background means I design with a real sense of how interfaces actually get built, not just how they look in a mockup.

I've worked across branding, app design, and front-end development, and I'm comfortable adapting my style to whatever a project needs, whether that's clean and minimal, bold and expressive, or anything in between. What drives me is how design makes people feel. A great product isn't just functional — it has a personality, an energy. It makes you want to use it. That's the standard I hold my work to.

WORK EXPERIENCE

UX/UI & Visual Designer · Freelance 2022 – Present

- Worked independently with clients across London and Norway on brand identity, UI design, and digital product work.
- Delivered full brand systems — logo, typography, colour palettes, and usage guidelines.
- Designed responsive website UIs and app screens from wireframe to pixel-perfect Figma handoff.
- Produced marketing materials including social graphics, posters, and email templates.
- Managed projects end-to-end: brief, concept, iteration, and final delivery.

UI/UX Designer — Internship · Designbyrå AS — Bergen, Norway 2023 – 2024

- Joined a mid-size digital product agency in Bergen, contributing to UX and visual design across web and mobile products.
- Owned end-to-end design of a customer-facing booking platform — from research and user flows to final UI.
- Ran usability testing sessions with Norwegian users and translated findings into actionable design improvements.
- Built and maintained a Figma component library used across three concurrent client projects.
- Presented design concepts and rationale directly to clients in weekly review meetings.
- Collaborated closely with front-end developers to ensure pixel-accurate implementation.

Personal Project · Fast Food Restaurant Website 2024

- Designed and built a responsive website for a fictional fast food brand from concept through to coded front-end.
- Created UI designs in Figma covering homepage, menu, and order flow, then implemented in HTML, CSS, and JavaScript.
- Focused on appetite-driven visual design — bold type, strong photography treatment, and high-contrast colour.
- Optimised layout for mobile-first experience with smooth interactions and clear calls to action.

EDUCATION

BSc Computer Science · London — Undergraduate 2023 – 2026

- Graduated with a BSc in Computer Science.
- Relevant modules: web development, human-computer interaction, algorithms, data structures.
